Case Study – One of the largest car rental agencies
In Vehicle Monitoring System

Objective
• Asset Visibility of more than 5000+ across Oman and Dubai
• Vehicle Loss/Theft
• Revenue loss due to non-productive Mileage.

Solution
• We implemented In Vehicle Monitoring System a web-based tracking and monitoring system to offer a close insight and detailed information about the vehicle location, movements, routes, and utilization. With features like geofencing and live monitoring on a GSI map, provides the organization to get a view of the entire operation.

Value Delivered
• Real-time monitoring on a large display ensured that the vehicle location and status is always known.
• In case of any suspicion of vehicle theft or abuse, the asset can be recovered by immobilizing the engine and limit the movement.
• By managing the Geofencing, an alert is delivered whenever an asset approaches an unauthorized (ex-County Border, Seaport), thereby enabling the concerned person to take swift action to prevent a possible theft.
