Case Study – A law and order agency in Oman
In Vehicle Monitoring System

Objective
• To monitor their employees’ behavior towards the citizens while discharging their duty
• To enhance the driving pattern of their employees
• To manage the employees during various shifts respective to different divisions
• To monitor driver behaviors, manage excessive speeding and to understand the reasons for speeding
• To avoid unnecessary and unauthorized trips

Solution
• GPS based vehicle tracking system to manage their assets spread across several regions of Oman
• Control and Command Center to quickly respond to the public in case of an emergency response request including Ambulance services, CID, Traffic Controller.
• iButton-based driver identification to identify the driver against a specific vehicle at any given point of time

Value Delivered
• Provide a 360-degree view of driver behavior on the ground with the help of various standard and customized reports.
• Geofencing provided a control of assets to a specific division/location thereby ensuring that the asset is available to the region at all time and any movement beyond an area is intimated immediately.
• The ability to create tags on the map showing the location of their main vehicles and depots and fleet servicing has also proven to be desirable standard features.

A law and Order agency in Oman. The main responsibility is to maintain law and order throughout the country, to protect people’s lives and property and prevent and investigate crimes. It is also in charge of road traffic, civil defense, customs, immigration and prison, and carrying out court sentences.
